Purina® Accuration® Range Liquid

Liquefy the forage gap

Range conditions are not always ideal. When forages are lacking, it's up to you to fill the gap and help cattle stay productive.

Purina® Accuration® Range Liquid is a self-fed, energy and protein supplement with Intake Modifying Technology.® It furnishes nutrients necessary to balance deficiencies in range cattle diets.

1. Maximizes forage use

- Encourages snack eating, causing cattle to be able to eat more forage and get more out of the forage they eat
- Feeding location can vary to encourage more uniform forage consumption

2. Convenient form

- For cattle in large range pasture situations, liquid supplement can be used for replacement heifer development, cows or heifers in mid-to-late gestation and for balancing deficiencies of late summer and fall forages
- Helps maintain optimal body condition and cattle performance with 5%, 10% or 12% fat formulas

3. Provides confidence

- The Purina® All Seasons™ Cattle Nutrition Program delivers solutions that give you confidence you're doing what's right for your animals and operation
- Ensures cattle energy needs are met year-round as forage availability changes

Liquid forms available with 5%, 10% and 12% fat.

Liquefy the forage gap. Rely on Purina® Accuration® Range Liquid to provide additional energy and help your cattle reach their fullest potential.
